

Emoze for Enterprise

Emoze for Enterprise provides a fully Telco grade integrated solution that is changing the way business operates. In today's ever changing market, global enterprises must have real-time communication and connectivity throughout the world. However, staying connected can be complicated, risky and expensive.

Emoze for Enterprise offers a totally secure solution. Simple for IT to deploy, maintain and control, Emoze for Enterprise is a centrally managed system that protects the confidentiality and integrity of sensitive and confidential corporate data enabling organizations to manage their information flow and to have control over data transfers based on IT policies.

Today's work force work is mobile and they require up-to-the-minute information wherever they are in order to maintain their productivity. However, they want mobility their way. They no longer want only the solutions that have traditionally been offered by networks and operators. They want solutions that enable them to use the handset they want, they network they want and the ability to get all their emails and attachments from all their different accounts and they want to get it all on just one mobile device.

Emoze for Enterprise is the ideal solution. With emoze, organizations are able to offer employees full functionality. They are able to use their personal mobile device to receive corporate email while still maintaining IT control of confidential company information.

Emoze supports multiple accounts and personal information management (PIM) on a wide array of mobile devices. Employees can access corporate, personal, and web-based emails as well as calendar, contacts, tasks, social media and other enterprise applications on their favorite device.

Emoze for Enterprise offers any business serious about increasing information access an award winning solution that offers the most flexibility along with the highest level of security and the lowest total cost of ownership.

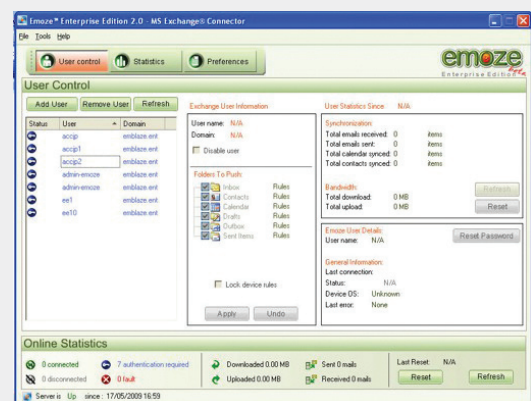

Features & Benefits

Secure

- No need to change corporate network configurations or open new ports
- Allows corporate IT to maintain flexibility and control over the flow of business data based on per user or per role profiles
- Allows corporate IT to establish security protocols and rule based policies
- Data is never duplicated nor stored on any servers other than the organization's secure mail server

Simple

- Admin Console – Intuitive GUI enables centralized management and control
- Perform all administrative and management functions
 - Managing users
 - Setting preferences and policies
 - Control passwords
 - Enable Inbox folders

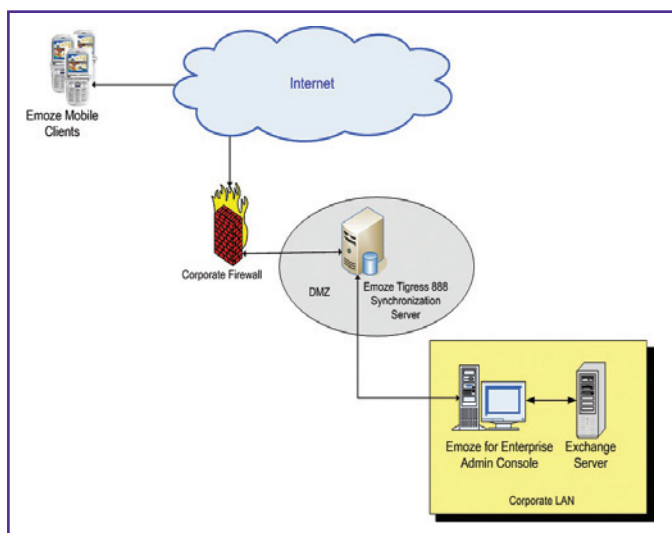

Low Total Cost of Ownership

- No need for expensive, dedicated mobile devices
- No need for expensive storage servers
- Easy to deploy

Emoze Mobile Push Email

Emoze for Enterprise offers true push email. Events are pushed directly from the data source to each user's mobile device as they happen. There is no need to constantly poll the server in order to check for new events. With emoze the entire process is transparent and the user is notified each time a mail arrives to the mobile device.

Emoze unique architecture provides safe and efficient data transfer. All data is encrypted using industry standard encryption for security. Emoze technology uses data compression to save network and device resources and to minimize cost of mobile data.

Smart Routing

Emoze has developed a unique messaging technology based on content routing only. Emoze never stores any information while transferring messages from the data source (email server or social network) to the mobile device.

Emoze's Tigress 888 server infrastructure is in charge of routing messages between the data sources (email servers and social networks) and the mobile devices.

When ever a new content (message) is detected on the data source or when the user composes a new message on the mobile device, the synchronization between the client and the server is done immediately.

Emoze Tigress 888 Servers

Emoze for Enterprise combines its award winning software with a leaner more resilient infrastructure designed to provide business organizations with a solution that offers high efficiency and outstanding performance while it minimizes operational expenditures.

Emoze for Enterprise can serve multiple users simultaneously even though users are all using different mobile devices. It also offers the IT Director to a number of features to control the users and manage the system without having to configure each type of mobile device manually.

The Tigress 888 is a smart infrastructure that enables business to adjust rapidly to changing business demands.

Each Tigress 888 is a dual processor capable server equipped with essential performance features that create a cost-effective solution that offers more computing power with less power consumption.

The Tigress 888 servers are density optimized for flexibility and manageability. They are ideal for multi-server deployments and are available in both rack and cluster models.

The Tigress 888 servers are flexible, modular server configurations with shared power and cooling, enabling increased server density, enhancing performance per watt/sq. foot

The modular design of the Tigress 888 provides total reliability redundancy and scalability while sharing resources in order to maximize the use of expensive resources.

Tigress 888 – 1U – supports 15,000 concurrent users.

Tigress 888 – 2U – supports 30,000 concurrent users.

The obvious benefit of this packaging is exceptional reliability, scalability and management efficiency in a system that features the lowest cost of ownership.
